

EMERGENCY NUTRITION INTERVENTION FOR CHILDREN UNDER FIVE, ADOLESCENTS, PREGNANT & LACTATING WOMEN (ENICAPLW)

May - 2019

Introduction

Violence in Rakhine State which began on 25 August 2017 has driven an estimated 723,000 Rohingya refugees (UNHCR, 2018) across the border into Cox's Bazar, Bangladesh. Since September 2017, SARPV has reached 8847 with treatment for Severe Acute Malnutrition (SAM). As per the new decision of Nutrition sector, SARPV has been started the screening, admission and treatment of children aged over five years from May, 2019. Due to extreme heat wave in whole Bangladesh, it was a tough weather condition everywhere especially in Cox's Bazar due to over humidity rate. The condition is worse in the camps due to over-crowding and deforestation. Sometimes, sudden rain fall in these time period also make difficult to stay in camp and provide services to refugees. During this month, SARPV has continued its activities to get rid of malnutrition with the help of UNICEF through different activities like treatment of acute malnutrition, IYCF-E counseling & messaging, conducting different awareness & sensitization meetings and sessions etc.

Program Achievements

May is the fifth month of the year in the Julian and Gregorian Calendars and the third of seven months to have a length of 31 days. In 2nd May Cyclone Fani, considered the strongest storm attacked the Indian subcontinent causing mass destruction across the eastern coast of India, which had entered into Bangladesh in 3rd May. Cox's Bazar port had been declared local warning signal no. 4. In this time, moderate rain and strong winds started affecting the land and the walkways in the camps became muddy. SARPV took emergency response to reach with key cyclone preparative messages to the beneficiaries. During this reporting period, 28132 children aged under five years and 1413 children aged over five years were screened for SAM among which 532 under five and 91 of over five children were identified as SAM and referred to SARPV SAM treatment centers (OTP) while 4 of them were identified with complications and referred to Stabilization Centers (SC). Moreover, 1165 children were also identified who were suffering from Moderate Acute Malnutrition (MAM) and among them 690 newly identified MAM were referred to TSFP for treatment. A total of 155 children aged under five were supplemented with Micronutrient Powder (MNP). A total of 360 adolescent girls and 168 PLWs were provided with Iron Folic Acid supplementation to prevent iron shortage and anemia. During this period, the cure rate was 96 percent (SPHERE standard set >75 percent) with default rate of 2 percent (SPHERE standard set <15 percent). To prevent children from Severe Acute Malnutrition, 429 pregnant and lactating women were given counseling on Infant and Young Child Feeding (IYCF).

Indicators	Monthly Target	UCP 1	UCP 2	KTP 1	KTP 2	KTP 3	KTP 4	KTP 5	KTP 6	Total	Variance
Number of U5 children screened at community level	24760	2046	2332	3992	4367	4736	4277	1939	4443	28132	-3372

Story of Ameena Begum (A beneficiary of kitchen garden)

As a vital part of this program, SARPV is emphasizing on kitchen gardening in the second phase which has been started from November, 2018. SARPV is leading the expansion of kitchen gardening to help improve lives around Rohingya camps. Kitchen gardening is simple enough to be taught to camp people for using the concept in their homes. A single kitchen garden affords enough to provide a large family with a year round supply of vegetables. Amena Begum, a beneficiary of the Camp 8W, SARPV OTP 3. Her son Lalu Mia was admitted as an SAM patient on OTP 3 in 24th April'19. Since then, Lalu Mia is under the supervision of OTP 3. OTP 3 cultivates many types of vegetables like bottle gourd, bitter melon, squash, tomato, chili etc. And these were distributed among their beneficiaries. Amena Begum was informed about the kitchen gardening from OTP 3 Nutrition Officer Md Mohibullah. The Nutrition Officer told all beneficiaries about the benefits of kitchen gardening through counseling and described them how vegetable can play vital role to keep the body healthy. Amena Begum benefited from getting the vegetables from OTP 3 and cooked those for her children and family. Inspired by OTP 3 keyhole gardening, she sowed the seeds of vegetable in the empty area around her house. She also agrees that fresh vegetables are available easily through the kitchen gardening which is very affordable and nutritious. Amena Begum also wished to get training & vegetable seeds from OTP so that she can implement the idea in her family properly.

Few pictures of different meeting and visits are presented below

USAID visit at Kutupalong OTP 1

UNICEF Nutrition Team visit at the MBA of Camp 3

Majhi Meeting at Unciprang OTP 2

Beneficiaries who received vegetable from Kutupalong OTP 3
